

Website & wireframes

Home Page

The home page will have the following features:

Hero banner. This will be used to highlight the overall strategy of the CA

Achievement tickers. The authority enjoys many achievements that go unannounced, these include growth in Internet penetration, growth of mobile access etc

In the new homepage we also make it easier to apply for license. Users will find a visible button, right at the homepage

All content on the website is also highlighted or linked from the homepage to cater for the user who does not know exactly what they want yet but wish to explore the site.

Community Telecentres

Telecentres are community access points mainly adopted for rural and high cost areas to reduce the cost of individual ownership...

Default Content Page

The inner page is especially important for users reading content on the site. A quick analysis of the current website shows that we have a number of pages containing short content and users have to click on other links to get the entire message being communicated. Our previous research from focus groups indicate that users dislike this. We therefore recommend that the content can be condensed into longer pages that communicate a story to users from end to end.

In addition, we recommend the use of multimedia content such as images, videos and gifs to break the reading monotony

In order to assist the user to navigate the page, we will also use an inpage navigation which will at all times indicate the users reading progress

Universal Access

The liberalization of the communications sector has had a positive effect on the deployment of communications infrastructure and services in the country.

Overview

The liberalization of the communications sector has had a positive effect on the deployment of communications infrastructure and services in the country. However, the opening up of the sector has not availed communications services to all in Kenya as the licensed commercial operators and service providers have tended to concentrate operations in areas where a return on investment is guaranteed.

Consequently, areas both urban and rural that are perceived as commercially unviable have over time remained either un-served or under-served. The Communications Authority of Kenya is responsible for ensuring that all in Kenya have access to affordable communication services.

To address the access gaps, the Communications Authority of Kenya has undertaken some pilot projects in certain parts of the country. The projects include the establishment of 18 school-based ICT centres spanning the eight regions of the country, four tele-centres and eight centres for persons with disabilities.

The Authority has, in collaboration with industry players, provided computers and internet connectivity to the beneficiary institutions. In order to enhance access and promote capacity building in ICT, the Authority has partnered with the Kenya Institute of Curriculum Development (Formerly Kenya Institute of Education) to support the digitalization of the secondary school curriculum.

The Authority is developing the Universal Service Fund (USF) Framework in line with the provision of the Sector Legislation.

Purpose of the fund

The Kenya Communications (Amendment) Act, 2009, provides for the establishment of a Universal Service Fund (USF), administered and managed by the Communications Authority of Kenya. The purpose of the Fund is to support widespread access to ICT services, promote capacity building and innovation in ICT services in the country.

The sources of the Fund include levies on licensees, appropriations from Government as well as grants and donations. The Fund, currently being put in place, is expected to finance national projects that have significant impact on the availability and accessibility of ICTs in rural, remote and poor urban areas.

Projects

The Commission has initiated a number of pilot projects aimed at informing future implementation of Universal Access (UA) projects on a nationwide scale.

ICT Access Gap Study

The Authority in 2016 undertook a detailed ICT Access Gap Study in Kenya. The objective of the study was to assess the communication gaps at the Ward and sub-location levels; develop an interactive Geographic Information System (GIS) portal for updating the gaps Service Fund (USF) and determining the cost of rolling out infrastructure projects including the requisite subsidies. The consultant will also assist the Authority to implement projects identified for funding in the first year of the Fund's 10-year investment program.

Geographic Information System (GIS) Interactive Portal ICT Coverage in Kenya

The Geographic Information System (GIS) portal is one-stop online interactive platform created by the Communications Authority of Kenya (CA) to provide a view of the different layers of ICT coverage in Kenya. The Geo-Portal will be updated on a regular basis and will assist the Authority in the identification of the gaps for each service area by giving GPS coordinates of selected Universal Service clusters (access point and required areas of intervention). The portal will also be used to determine the extent of communication coverage and the access levels by citizens.

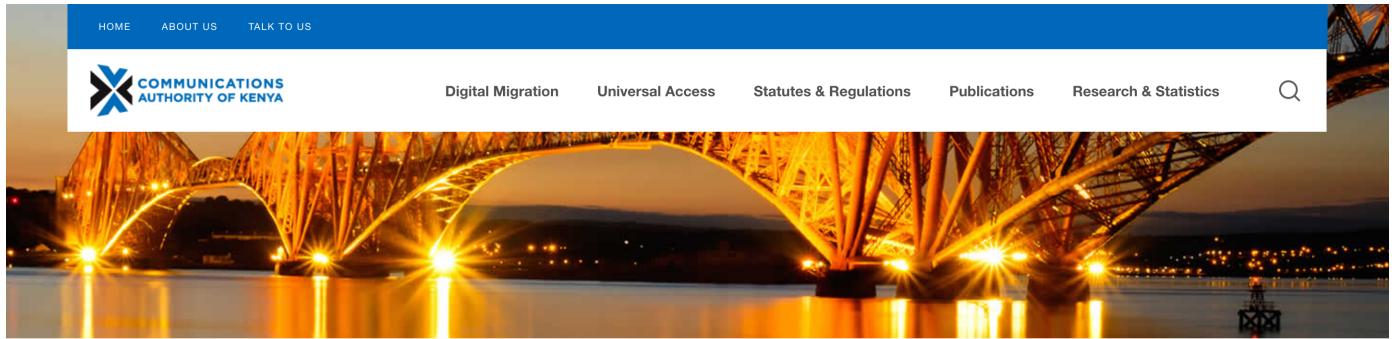

The portal is accessible to the different users through the links provided below:

1. Public Users Link: The map is accessible to anyone who wants to access the map on the Authority's website
2. Government Users Link: Government officials working in different ministries have access to the ICT Access Gaps and the users are expected to have credentials (Username and password) to access the map.

Board of Directors

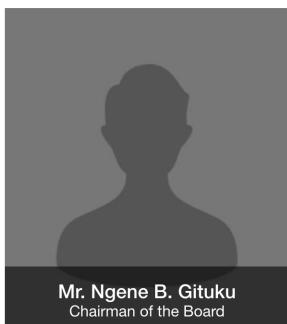

Every single page on the website holds a lot of potential. To demonstrate this, we picked this page on the website and revised it to showcase the sites potential

With this layout, the content is quite easy to navigate and content on each director is laid out in a format that is easy to follow

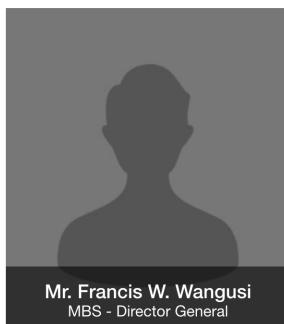

Board of Directors

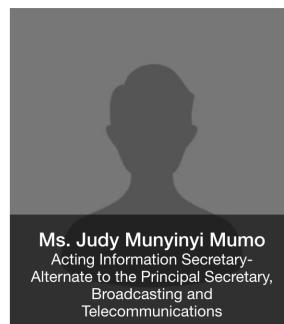

The Authority's Board of Directors is responsible for the supervision of overall affairs of the Authority.

Repository website page

In our review we noted that the current site contains a lot of pdf content. Navigating and locating content proved to be quite challenging. The biggest issue was understanding where which menu item a certain resource item would be under. For this reason, we propose replacing the existing format with a document repository.

for easy navigation. This will allow even new users to find what they are looking for in a short amount of time.
